Hiring Manager
Parallel Solutions
Nashua, NH

Dear Hiring Manager,

I am excited to submit my application for the 5G/LTE Network Engineer I position at Parallel Solutions. This role resonates with my background and aspirations in telecommunications, an industry where I thrive amid innovation and challenges. With a fresh perspective, I bring an analytical approach and dedication to advancing mobile network infrastructures.

During my time at University Research Lab, I developed and configured LTE eNodeB in a lab environment, requiring teamwork to ensure integration with vital core network components. It wasn't always smooth sailing; I grappled with complex protocol analysis but emerged more capable, interpreting STAP and NGAP traces to pinpoint and resolve issues that had stumped others, enhancing system performance in a real-world context.

In addition to hands-on experience, during a recent hackathon, I partnered with peers to craft a prototype for a 5G network monitoring tool. We employed AI to bolster anomaly detection, complemented by my data collection scripts in Bash. Our efforts led to recognition for innovation, and I presented findings that spotlighted the tool's market potential. Such projects fuel my drive to explore advancements within 5G technology.

I am eager to contribute my expertise to Parallel Solutions and help lead the charge in shaping the future of mobile network performance.

Sincerely,

Cesar Shaw
