Hiring Team
Northstar Life Sciences Cloud
Austin, Texas
United States

Dear Hiring Team at Northstar Life Sciences Cloud,

I am excited to apply for the Associate QA Automation Engineer role at Northstar Life Sciences Cloud. Your work helps life sciences companies bring therapies to patients faster, and my experience testing regulated healthcare and life sciences SaaS applications makes this role a natural next step for me.

In my current role at CedarBridge Health Cloud, I build and maintain **Java** tests for **API and UI automation scripts** across clinical content, customer configuration, and regulated document review workflows. I assess manual scenarios for automation feasibility, create reusable test patterns, and extend Selenium and Cucumber coverage for browser-based features.

I have hands-on experience with **CI/CD tools**, including Git, Jenkins, and JIRA. I use Jenkins for smoke and regression runs, trace results in JIRA, and document failures with clear evidence for developers and product owners. My work with AWS EC2, S3, and WorkSpaces has helped me isolate environment issues in cloud test systems.

I hold a Bachelor of Computer Applications from Texas State University and have more than three years of experience in Agile/Scrum teams. I communicate test status clearly with onshore managers, offshore testers, and distributed leads, and I am comfortable working independently on technical assignments. I would bring practical automation skills and a steady focus on release quality to your team.

Thank you for your consideration. I look forward to discussing how my QA automation experience can support Northstar Life Sciences Cloud.

Sincerely,
