AUGUST 17, 2026

Recruitment Team
Scout Motors
Novi, MI

Dear Hiring Committee,

I am eager to express my interest in the Brake System Development Engineer opportunity at Scout Motors, an enticing position where my vast experience can make an immediate impact on your innovative team. With a decade-long journey in automotive engineering, I have cultivated a diverse skill set and a passion for developing and refining brake systems that meet rigorous standards.

At AutoTech Innovations, I spearheaded a project aimed at creating advanced brake systems, ensuring compliance with stringent regulations. This role sharpened my capabilities in executing DVP&R activities, bolstered by a 30% enhancement in verification processes achieved through diligent efforts. My time at Brake Systems Inc. taught me the nuances of NVH testing and data analysis, while simultaneously allowing me to collaborate directly with OEMs to align on project expectations.

Engaging in such dynamic environments has been both challenging and rewarding. There were moments of confusion and struggle as projects encountered obstacles. Yet, those hurdles fueled my growth and reinforced my commitment to continuous improvement. It is in collaboration with cross-functional teams that I found solutions and ignited innovation, learning to turn challenges into triumphs.

I thrive in spaces where innovation meets collaboration. This affinity propels my desire to contribute to Scout Motors, where pioneering automotive technologies are born. Your mission resonates with me, as does the chance to drive enhancements in brake systems, ensuring quality and performance are never compromised. My analytical mindset pairs with strong problem-solving skills to create solutions that enhance product offerings.

I look forward to the opportunity to contribute to your exceptional team.

Sincerely,

Jett Payne
