Hiring Manager
Northstar Medical Society
Evanston
IL

Dear Hiring Manager,

I am applying for the Cloud Engineer role at Northstar Medical Society. I bring eight years of experience building and securing Azure and Microsoft 365 environments, including work supporting healthcare operations and PHI. My focus is practical: create reliable platforms, make security controls usable, and give technical and business leaders clear information for making decisions.

In my current role, I established a quarterly cloud roadmap that connects architecture diagrams, migration dependencies, risk decisions, and investment recommendations. I also reorganized Azure landing-zone policies, privileged-access reviews, and Defender workflows, then coordinated incident response, vulnerability remediation, audit evidence, and GRC tracking. These efforts helped connect day-to-day administration with the broader security and compliance needs of a healthcare organization.

I have also led hands-on delivery. At Redwood Advisory Group, I migrated 18 on-premises workloads to Azure using dependency mapping, phased cutovers, rollback plans, and post-migration validation. With Terraform and Azure DevOps, I standardized provisioning across development, test, and production environments. I have built cloud budget dashboards, supported rightsizing and reservation reviews, administered Intune, and worked with vendors on security assessments and privacy reviews. That combination would allow me to contribute to Northstar's cloud engineering, risk management, and cybersecurity work from the start.

I hold Microsoft Azure Administrator Associate, Azure Solutions Architect Expert, Microsoft Cybersecurity Architect Expert, and CompTIA Security+ certifications. I am based in Chicago and can commute to Evanston as required. My salary expectation is \$120,000, depending on the overall compensation package and scope of the role. I would welcome the opportunity to discuss how I can help Northstar strengthen its cloud environment while keeping operations dependable and understandable.

Thank you for your consideration. I look forward to hearing from you.

Sincerely,

Jasper Woods
