Data Intern

AUGUST 08, 2026

Acres
Hiring Manager
Fayetteville, AR

Dear Hiring Manager,

I am eager to apply for the Data Intern position at Acres. This opportunity excites me, aligning directly with my growing interest in data science and agricultural analytics, which ultimately could help transform how land data is approached in our communities.

Acres presents a chance to engage with innovative practices, emphasizing teamwork and exploring agriculture's intersection with technology. I appreciate how your team values curiosity and creativity, traits that I not only possess but also encourage in others. My projects during my studies involved collaborative research that unveiled significant land transaction patterns.

In a recent university project, I joined forces with fellow students. Together, we analyzed agricultural land data, enhancing precision in visualization and giving clearer insights for decision-making. Continually supported by feedback from peers, the experience taught me the invaluable nature of collaboration.

Through my role as a Research Assistant, I mapped property boundaries using GIS, ensuring a blend of accuracy and detail. This role guided my desire for precision and solidified my commitment to maintaining data integrity, especially concerning agricultural trends.

I truly believe my passion for geospatial analysis can contribute positively to Acres. I aim to foster a team environment, sharing innovative solutions that enhance research efforts. I would be thrilled to align with a team that seeks excellence in every project.

Thank you for considering my application.

Sincerely,

*Liam Wells*
