Hiring Team
Northstar Meridian Consulting
Denver, CO

Dear Hiring Team at Northstar Meridian Consulting,

I am excited to apply for the Data Solutions Architect position at Northstar Meridian Consulting. With nine years of experience across consulting and industry delivery, I bring a strong mix of **Snowflake architecture**, data engineering, analytics engineering, and full-stack application development. I am drawn to this role because it combines hands-on technical work with client advisory and **team leadership**.

In my current role, I lead Snowflake-centered programs from discovery and proof of concept through implementation, testing, enablement, and production support. I translate finance, operations, CRM, and supply chain needs into scalable data platforms, **data pipelines**, **semantic layers**, **certified datasets**, and KPI frameworks. My work includes warehouse strategy, RBAC, performance reviews, cost controls, data quality, lineage, and observability.

I communicate well with both business and technical stakeholders, and I enjoy turning unclear reporting needs into practical delivery plans. I have built secure APIs and analytics applications with Python, FastAPI, TypeScript, React, OAuth, and governed Snowflake access. I have guided developers, data engineers, and analysts through architecture reviews, code reviews, testing, deployment, and production readiness.

Northstar Meridian Consulting interests me for its focus on helping clients move from manual reporting and fragmented data toward trusted, governed, and actionable analytics. The opportunity to support clients from proposal through delivery, build proof-of-concept solutions, and help grow the Data Solutions practice is a strong match for my background and goals. My SnowPro Advanced: Architect certification and client-facing delivery experience would let me contribute from day one.

Thank you for your consideration. I would welcome the opportunity to discuss how I can contribute to Northstar Meridian Consulting and its clients.

Sincerely,

Leonardo Mullins
