## DevOps Architect Cover Letter

SEPTEMBER 01, 2026

Hiring Team  
Northstar Freight Systems  
Bentonville, AR

Dear Hiring Team at Northstar Freight Systems,

I am excited to apply for the DevOps Architect position at Northstar Freight Systems. My background in platform architecture, **CI/CD engineering**, and developer enablement fits the needs of a team supporting a large engineering organization in supply chain, logistics, and transportation.

In my current role, I set **Kubernetes** delivery architecture for 700 developers and guide standards for service onboarding, release controls, and platform use. I have rebuilt **Azure DevOps** and GitHub Actions pipelines with Python and YAML, created reusable Terraform patterns for **infrastructure as code**, and helped teams move from scattered release practices to consistent, self-service workflows.

I bring a practical approach to difficult CI/CD issues across Linux and Windows systems. I work directly with developers and technology teams to diagnose Kubernetes, build agent, secrets, artifact, and deployment problems. I enjoy turning recurring failures into clear runbooks, automation, and **process improvements** that support faster delivery and reliable operations.

Northstar Freight Systems interests me because this role connects technical architecture with real work in logistics and transportation. The chance to own **CI/CD engineering** initiatives, improve development speed and workflow consistency across the organization, and collaborate with a small, highly skilled team is a strong match for how I work.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my experience can support Northstar Freight Systems.

Sincerely,

*Jasper Woods*
