SUMMARY

Recent Computer Science graduate prepared to support Azure cloud infrastructure, automation, CI/CD delivery, and dependable software operations. Hands-on university work covered Terraform, Bicep, Azure Resource Manager templates, PowerShell, Azure DevOps, Docker, Kubernetes, Chef, Backstage.io, and .NET application delivery. Built repeatable environments, release pipelines, validation scripts, containerized services, and troubleshooting guides for supervised projects. Investigated deployment failures through logs, diagnostics, activity history, and configuration reviews, then explained findings clearly during sprint presentations and technical demonstrations. Brings curiosity, patience, and a team-first approach to collaboration with developers, QA engineers, cloud engineers, and senior DevOps professionals. Ready to contribute while growing across DevOps, Site Reliability Engineering, Cloud Engineering, and Platform Engineering.

EXPERIENCE

DevOps Engineering Project Assistant

University Cloud Automation Lab 📅 September 2025 - May 2026 📍 Kansas City, MO

Supported supervised cloud automation work for ASP.NET Core delivery, Azure environments, release operations, and platform documentation. Partnered with faculty, classmates, and project teams across development, QA, and infrastructure activities. Contributed implementation decisions, diagnostics, demonstrations, and runbooks that improved consistency across lab environments.

- Created Terraform templates for ASP.NET Core deployment, giving classmates repeatable Azure IaaS environments.
- Built Azure DevOps pipelines with NuGet restoration, .NET tests, artifacts, and staged promotion.
- Wrote PowerShell validation scripts for variables, Azure resource health, and release preparation.
- Containerized services with Docker and Kubernetes, documenting image tags, settings, and rollback steps.
- Diagnosed Azure deployment failures through pipeline logs, ARM messages, and configuration reviews.
- Presented monitoring, access control, and environment consistency recommendations during faculty release reviews.

Cloud DevOps Capstone Contributor

Capstone Software Delivery Project 📅 January 2025 - August 2025 📍 Supported .NET scheduling delivery through Azure App Service, Azure Storage, and virtual machines.

Contributed within a five-person student team delivering a .NET scheduling application across Azure App Service, Azure Storage, and virtual-machine test resources. Focused on pipeline quality, environment definitions, release controls, and operational notes. Shared findings during architecture reviews and supported practical decisions around testing, permissions, and recovery.

LEADERSHIP & AWARDS

EDUCATION

Bachelor's Degree in Computer Science

University of Missouri–Kansas City 🎓 GPA: 3.7 📅 2026 📍 Kansas City, MO

Coursework: Cloud computing, software engineering, infrastructure automation, distributed systems

TECHNICAL SKILLS

STRENGTHS

SKILLS

LANGUAGES

MY CAREER

● DevOps Engineering Project Assistant at University Cloud Automation Lab (8 Months)

● Cloud DevOps Capstone Contributor at Capstone Software Delivery Project (7 Months)
