Hiring Manager
Waters Technologies
Minneapolis, MN

Dear Hiring Manager,

I am excited to apply for the Entry Level Medical Device Engineer position at Waters Technologies, an opportunity that perfectly aligns with my academic background in Biomedical Engineering and my extensive experience in automation systems, all of which are keenly relevant to this role, demonstrating a strong passion for impactful innovations in the medical device sector.

Understanding customer needs deeply resonates with your mission, making me eager to contribute to your exceptional service standards; my hands-on experience in developing automated systems and troubleshooting complex electronics equips me to tackle the challenges associated with installation and maintenance of advanced diagnostic tools efficiently.

Collaboration and teamwork have always been pivotal in achieving goals, which is why I thrived during university projects where I effectively developed efficient tools and interfaces for users, all while ensuring compliance with safety standards; albeit, there were moments of doubt, questioning whether my skills were sufficient for high-stakes environments.

Specifically, my project involved enhancing operational efficiency and user experience in a lab setting, which demanded sophisticated problem-solving skills and technical knowledge, as I documented and shared results with diverse teams, sharpening both my engineering acumen and communicative prowess.

This meticulous journey honed my passion for service-oriented engineering; thus, I truly believe I can contribute meaningfully to Waters' commitment to delivering top-tier diagnostic solutions while enhancing customer satisfaction through proactive communication and technical assistance.

Thank you for your consideration.

Sincerely,

Hana Valencia
