Dear Hiring Manager,

I am eager to apply for the Entry Level Water Resources Engineer position at AMT Solutions, believing this opportunity closely aligns with my capabilities and aspirations. I have recently graduated with a Bachelor's degree in Civil Engineering, where my passion for effective water management flourished, deepening my knowledge and skills in various relevant topics like stormwater management and hydraulic modeling.

During my internship at the University, I learned valuable skills while working on a redevelopment project. I successfully utilized AutoCAD Civil 3D to devise stormwater management plans. In this experience, I faced challenges with data analysis but persisted, ultimately presenting efficient outcomes that met core project requirements. Collaboration with peers and faculty was crucial, resulting in a shared investment in project success and the building of strong relationships.

I contributed actively to research about urbanization's impact on hydrology, gaining insights that revealed how crucial drainage systems are for community safety. In presenting our findings, I noticed the importance of clear communication; these experiences sharpened my ability to share ideas with colleagues and clients alike. I believe that my background equips me to collaborate effectively, establishing strong relationships within your diverse team.

I admire AMT Solutions for its commitment to creating sustainable and engaging environments, balancing project goals with employees' well-being. I seek an opportunity where I can merge my practical skills with a forward-thinking approach, contributing meaningfully to projects while growing as part of a dedicated team. Though new to the field, I am excited to learn and face challenges head-on.

Thank you for considering my application.

Sincerely,

Autumn French

Autumn French
