Hiring Team
Redwood Federal Solutions
Remote
Pierre, South Dakota

Dear Hiring Team,

I am applying for the Front End Web Applications Developer role because my recent work closely matches the BAS application your team is developing. Over the past seven years, I have built front-end applications for federal budgeting, higher education planning, and enterprise reporting. In my current role, I develop SAP Analytics Cloud Analytics Designer widgets and JavaScript services for a Budget and Spend application used by federal finance analysts.

That work involves more than building screens. I translate quarterly planning requirements into reusable components, combine REST responses with XML and JSON transformations, and design views for appropriations, obligations, and forecasts. I also work with product owners and UX designers to identify navigation, browser, accessibility, and data-volume constraints before development begins. This has helped the team avoid late design changes and give users a consistent workflow across budget scenarios.

I have also focused on the maintenance work that keeps these applications dependable. I refactored object-oriented JavaScript modules and event-handling patterns to reduce duplicated logic, established browser profiling and API-response checks for high-use screens, and investigated rendering and data-binding issues with repeatable debugging and regression tests. In code reviews, I look for clear ownership, predictable state changes, and documentation that will help the next developer understand why a decision was made.

I hold an active Public Trust clearance and am a U.S. citizen. My background includes federal and state financial applications, SAP Analytics Cloud Analytics Designer, REST integration, and agile SDLC practices. I would welcome the opportunity to bring that experience to Redwood Federal Solutions and help make the BAS application accurate, responsive, and practical for its users.

Thank you for considering my application. I would be glad to discuss how my experience fits the BAS team.

Sincerely,

Leo Pitts
