SES
Hiring Manager
Chicago, IL

Dear Hiring Manager,

I am eager to apply for the Intern Java Engineer position at SES, a thrilling opportunity that perfectly aligns with my educational background and my diverse experiences in AI system development, fostering impactful solutions that effectively meet unique business needs.

In my journey as a Computer Science student, I've designed various AI-based projects while collaborating with diligent teams, cultivating skills that connect technology with community engagement, which I genuinely find invigorating.

Currently, I'm an AI Development Intern where I spearheaded the creation of intelligent chatbots, amplifying academic support for peers, and enhancing overall user experiences. It's been rewarding to see effective systems come alive from raw concepts.

Participating in Agile sprints, I've collaborated closely with peers to implement RAG pipelines that significantly improved data retrieval accuracy. My coding efforts led to a 30% quicker response time when interacting with AI systems, marking a clear success in user satisfaction.

What's more, building a full-stack application using FastAPI and React taught me the essence of clear communication within teams. I cherish moments of constructive criticism from my peers as it sharpens my technical capabilities and fuels further learning.

Thank you for your consideration.

Sincerely,

Raymond Pham
