STRENGTHS

- 🏗️ **Architecture leadership**
Design reviews connected service boundaries, API contracts, and data models with practical delivery decisions.
- 🔒 **Secure engineering**
Authentication projects applied OIDC, OAuth 2.0, JWTs, and least privilege controls. Security stayed part of delivery.
- 🔔 **Production awareness**
Structured logs, metrics, tracing, alerts, and runbooks gave incident teams clearer paths through difficult outages.
- 🔗 **API craftsmanship**
GraphQL and REST work balanced consumer needs, compatibility, pagination, caching, and sensible service ownership.
- 👥 **Practical collaboration**
Cross functional discussions turned technical constraints into documented standards, and teammates sought input on difficult decisions.

SKILLS

Java Spring Boot GraphQL
REST APIs AWS
Aurora PostgreSQL AWS Neptune
Gremlin Amazon MSK Kafka Git
CI/CD Automated testing
Observability OAuth 2.0

LANGUAGES

English Native
Polish Proficient

SUMMARY

Lead Java full stack engineer with nine years of progressive experience delivering secure, **cloud native financial services** applications. Four years have focused on technical design leadership, architecture reviews, code quality, and production delivery across Java, Spring Boot, GraphQL, REST APIs, AWS, **Aurora PostgreSQL**, Neptune, Gremlin, Amazon MSK, Kafka, and CI/CD. Builds practical service boundaries, API contracts, data models, authentication flows, observability controls, and automated tests that support dependable operations. Partners with engineers and business stakeholders to turn technical constraints into clear delivery decisions, recovery plans, and engineering standards. Hands on work includes OIDC, **OAuth 2.0**, JWTs, scopes, claims, least privilege controls, structured logging, metrics, tracing, alerts, runbooks, and incident readiness. Responsible use of Claude Code and GitHub Copilot supports faster development while preserving human review, security, and accountability.

EXPERIENCE

Lead Full Stack Engineer

Redwood Ledger Technologies 📅 May 2022 - Present 📍 Dallas, TX

Leads cloud native financial services applications and API platforms across architecture, implementation, security, testing, observability, and production operations. Guides design reviews, code reviews, delivery standards, incident response, and cross functional decisions while remaining active in Java and Spring Boot development.

- Led **GraphQL** schema reviews for financial services APIs, improving contract clarity and consumer adoption.
- Built **Spring Boot** services with OAuth 2.0 and JWT flows, strengthening **secure** service communication.
- Modeled Aurora PostgreSQL transactions and migrations, supporting reliable data operations in production.
- Connected **Amazon MSK** events with idempotent consumers, retries, and dead letter handling.
- Established metrics, tracing, alerts, and runbooks, giving teams clearer incident response paths.
- Used **Claude Code** and **GitHub Copilot** for tests and refactoring with human security review.

Senior Java Engineer

Prairie Stone Financial Systems 📅 August 2019 - April 2022 📍 Irving, TX

Delivered high availability transaction and customer data services across Java, Spring Boot, REST, GraphQL, AWS, PostgreSQL, Kafka, testing, and observability. Guided API evolution, production support, architecture decisions, and incident response while building stronger engineering practices across delivery teams.

- Designed **REST APIs** with pagination and backward compatible contracts for customer data services.
- Optimized PostgreSQL indexes and **SQL** queries, improving transaction service reliability during peak demand.
- Implemented Kafka **consumer groups** and **schema evolution**, supporting dependable event delivery across services.
- Added contract and integration tests around GraphQL resolvers, reducing release risk for API changes.
- Created **structured logging** and tracing dashboards, helping responders isolate production faults faster.
- Guided code reviews and architecture discussions, turning recurring defects into shared **engineering standards**.

Java Full Stack Engineer

Lone Star Application Works 📅 June 2017 - July 2019 📍 Richardson, TX

Built full stack services and integrations using Java, Spring Boot, REST APIs, SQL, Git, CI/CD, **unit testing**, **integration testing**, and AWS fundamentals. Took increasing ownership of service design, release quality, troubleshooting, and stakeholder communication across customer focused delivery

MY CAREER

- Lead Full Stack Engineer at Redwood Ledger Technologies (4.3 Years)
- Senior Java Engineer at Prairie Stone Financial Systems (2.7 Years)
- Java Full Stack Engineer at Lone Star Application Works (2.1 Years)

- work.
- Built Spring Boot REST services with SQL persistence, supporting dependable customer workflows.
 - Created Git based **CI/CD** pipelines, making releases more repeatable for application teams.
 - Added unit and integration tests around **service boundaries**, catching defects before deployment.
 - Investigated **AWS** application issues through logs and **metrics**, restoring stable service operation.
 - Documented API behavior and recovery procedures, giving support teams clearer production guidance.
 - Partnered with developers and stakeholders on design choices, building confidence in release plans.

PROJECTS

- GraphQL Federation Modernization** 📅 2024
- Reworked service composition, resolver behavior, caching, and query optimization for a financial data platform. The effort clarified ownership boundaries and supported safer API evolution.
- Event Driven Transaction Processing** 📅 2022
- Applied Kafka topics, partitions, consumer groups, retries, idempotency, and dead letter queues across transaction workflows. Monitoring and runbooks improved operational response.

LEADERSHIP & AWARDS

- Technical Leadership Recognition, Redwood Ledger Technologies, 2025
- Architecture Excellence Award, Prairie Stone Financial Systems, 2021
- Engineering Quality Leadership, Lone Star Application Works, 2019

EDUCATION

- Bachelor's Degree in Computer Science**
- University of Texas at Dallas 🎓 GPA: 4.0 📅 2017 📍 Richardson, TX
- Coursework:** Data Structures, Database Systems, Software Engineering, Operating Systems*

CERTIFICATIONS

- AWS Certified Developer Associate 📅 2025
- AWS Certified Solutions Architect Associate 📅 2024

TECHNICAL SKILLS

- **Java Frameworks:** Java, Spring Boot, Spring Security
- **API Development:** GraphQL, REST APIs, OpenAPI
- **AWS Services:** AWS IAM, AWS networking, AWS CloudWatch
- **Database Systems:** Aurora PostgreSQL, SQL, database migrations
- **Graph Databases:** AWS Neptune, Gremlin, graph modeling
- **Event Streaming:** Amazon MSK, Kafka, consumer groups
- **Identity Security:** OIDC, OAuth 2.0, JWTs
- **Testing Methods:** Unit testing, integration testing, contract testing
- **Delivery Tools:** Git, CI/CD, GitHub Actions
- **Observability:** Structured logging, metrics, tracing
- **Messaging Reliability:** Idempotency, retries, dead letter queues
- **Developer Assistance:** Claude Code, GitHub Copilot, documentation

PROFESSIONAL AFFILIATIONS

- Member, Association for Computing Machinery, Dallas chapter
- Member, Cloud Native Computing Foundation community
