Hiring Manager
Bright Foods
Chicago, IL
60601

Dear Hiring Manager,

I am thrilled to apply for the Manufacturing & Engineering Associate Intern role at Bright Foods, which resonates profoundly with my engineering journey, where I have actively engaged in academic projects and hands-on experiences that shaped my technical skills and leadership aspirations as I intricately weave my ambition into practical applications.

During my stint as a Manufacturing Optimization Developer, I led a team endeavoring to enhance production efficiency, producing a significant 15% waste reduction, which was not just a number but a transformative experience emphasizing collaborative solutions to real-world manufacturing challenges.

Sustainability is vital; hence, my recent project evaluating biodegradable packaging solutions demonstrated my commitment to sustainable practices, with results yielding a 10% cost reduction, underscoring my inquiry into innovative processes that profoundly affect both business and environmental landscapes.

When I spearheaded the capstone project creating a food processing system, it was a challenging yet stimulating experience where I not only analyzed energy consumption but also developed engaging presentations for industry professionals, embodying my passion for marrying creativity and engineering.

Bright Foods' emphasis on innovation and quality aligns with my goals, and I see a perfect synergy in our missions, as I aspire to contribute actively to teams that prioritize excellence while achieving continuous improvement, reflecting on my growth and learning through every engagement.

Looking forward to contributing positively,

Thanks,

Joseph Kim
