### STRENGTHS

- 🏗️ **Framework Architecture**  
Built shared browser and API foundations for scientific products; teams gained a clearer path from coverage gaps to maintainable tests.
- 🔬 **Scientific Domain Testing**  
Tested sample chains, measurements, units, and visualizations; domain specialists trusted results during difficult release discussions.
- 🔄 **Pipeline Reliability**  
Improved Jenkins feedback with parallel stages, artifacts, and monitoring; nightly failures became easier for teams to investigate.
- 💡 **AI-Assisted Engineering**  
Used Copilot, Windsurf, and Claude for drafts and edge cases, then applied review discipline before any merge.
- 👥 **Team Coaching**  
Coached junior engineers through locator, timing, and flaky-test issues; peers often sought practical advice on stubborn failures.

### SKILLS

Playwright Selenium WebDriver

Java Python TypeScript TestNG

PyTest Karate Framework

Cucumber BDD Jenkins Pipelines

Gitflow Allure Framework

AWS Services API Testing

LIMS Testing

### LANGUAGES

English

Native

### SUMMARY

Senior **QA Automation Engineer** with 7+ years delivering UI, API, and **BDD** quality engineering for **scientific** software and laboratory data workflows. Builds scalable automation frameworks with Java, Python, TypeScript, Playwright, **Selenium WebDriver**, TestNG, PyTest, Karate, Cucumber, Jenkins, AWS, and Allure. Recent work supports LIMS platforms, chemical sample intake, chain-of-custody controls, result approval, units of measure, integrations, and scientific dashboards. Leads Gitflow practices, pipeline reliability work, dynamic locator diagnosis, network-state testing, and evidence-based defect analysis across distributed squads. Uses GitHub Copilot, Windsurf, and Claude for test design, refactoring, edge-case analysis, and junior engineer coaching. Ready to help a scientific software team shorten feedback cycles, strengthen release confidence, and deliver dependable automation across UI, API, and BDD layers.

### EXPERIENCE

#### Senior QA Automation Engineer

HelixPoint Laboratory Technologies 📅 April 2025 - Present 📍 Raleigh, North Carolina

Owns automation strategy for a cloud LIMS platform supporting chemical sample intake, chain-of-custody controls, result approval, and scientific dashboards. Guides framework modernization, API coverage, pipeline operations, AI-assisted quality practices, and technical coaching across product squads.

- Rebuilt **Playwright TypeScript** coverage with asynchronous fixtures and resilient locators for laboratory release workflows.
- Added Allure attachments and traces, giving release teams clearer evidence during complex sample approval investigations.
- Extended **Java** Selenium WebDriver and **TestNG** suites during gradual migration toward modern Playwright browser coverage.
- Designed Karate API suites validating sample services, unit conversions, authentication paths, and downstream integration behavior.
- Maintained **Jenkins** pipelines on AWS EC2 with S3 artifacts and CloudWatch regression monitoring.
- Applied **Gitflow** reviews with Copilot, Windsurf, and Claude for safer test scaffolding and edge-case analysis.

#### QA Automation Engineer

Apex Meridian Analytics 📅 January 2023 - March 2025 📍 Durham, North Carolina

Delivered quality engineering for scientific visualization and **laboratory** reporting products used by analytical chemistry and materials research groups. Built shared Python automation, expanded browser and API coverage, translated domain requirements into BDD scenarios, and coached junior engineers.

- Created shared **Python PyTest** framework with asynchronous utilities, fixtures, and service clients for testing.
- Added Playwright coverage for trend charts, filters, exports, and role-based access workflows.
- Paired failures with screenshots, traces, and Allure metadata for faster release triage conversations.
- Translated measurement and exception requirements into Cucumber features with reusable step definitions.
- Built **Jenkinsfile** stages for parallel execution, environment provisioning, result publishing, and rerun analysis.
- Coached three junior engineers on **dynamic locators**, flaky-test diagnosis, Claude, and **GitHub Copilot**.

#### QA Automation Engineer

Cobalt Ridge Software 📅 July 2020 - December 2022 📍 Charlotte, North Carolina

## MY CAREER

- Senior QA Automation Engineer at HelixPoint Laboratory Technologies (1.4 Years)
- QA Automation Engineer at Apex Meridian Analytics (2.2 Years)
- QA Automation Engineer at Cobalt Ridge Software (2.4 Years)
- Junior QA Automation Engineer at Blue Oak Digital Labs (1.7 Years)

- Expanded quality engineering for a LIMS product connecting instrument data, sample records, and customer result portals. Maintained browser suites, added **REST** integration coverage, improved reporting evidence, and partnered with domain specialists on **chemical** workflow validation.
- Replaced brittle Selenium selectors and synchronized browser actions with asynchronous service responses.
  - Added Karate coverage for registration, result status, permissions, and units-of-measure validation.
  - Configured Allure dashboards with attachments, environment details, historical trends, and failure categories.
  - Managed **Git** feature branches, pull requests, webhooks, and controlled integrations across four product modules.
  - Converted chemical workflow specifications into boundary, negative, and data-integrity tests for Jenkins execution.
  - Improved release readiness discussions through clearer failure evidence and domain-focused regression coverage.

### Junior QA Automation Engineer

Blue Oak Digital Labs 📅 October 2018 - June 2020 📍 Greensboro, North Carolina

Supported supervised automation for web applications capturing laboratory observations, managing chemical samples, and reviewing instrument-derived records. Built foundational Java, Python, BDD, Jenkins, Git, AWS, and scientific data testing experience alongside senior quality engineers.

- Developed **Java** utilities, Selenium page objects, and TestNG cases for sample workflows.
- Added **Python** PyTest checks for service responses and database-facing laboratory data validations.
- Converted manual acceptance scenarios into **Cucumber** features and reusable step definitions.
- Created Jenkins jobs for scheduled browser suites with archived logs and screenshots.
- Used structured defect evidence to separate application defects from environment and timing failures.
- Practiced Git **branching** and pull requests while learning **AWS** test environments and scientific presentations.

## PROJECTS

### Cloud LIMS Regression Modernization 📅 2025

Improved release confidence through asynchronous Playwright coverage, Karate service checks, Allure evidence, and AWS-backed Jenkins regression operations for laboratory workflows.

### Scientific Visualization Quality Framework 📅 2024

Created a Python and PyTest framework for charts, exports, measurement data, role paths, and API validation across scientific reporting workflows.

### Chemical Workflow BDD Library 📅 2022

Turned laboratory specifications into readable Cucumber scenarios covering sample registration, approvals, exceptions, permissions, and units-of-measure integrity.

## LEADERSHIP & AWARDS

- Recognized by engineering leadership for modernizing laboratory automation coverage and improving release evidence quality.
- Selected as a peer mentor for junior engineers learning dynamic locator diagnosis and AI-assisted QA workflows.
- Received team recognition for dependable Jenkins regression support across scientific product releases.

## EDUCATION

### Bachelor's Degree in Computer Science

University of North Carolina at Greensboro 🎓 GPA: 3.5 📅 2018 📍 Greensboro, North Carolina

**Coursework:** *Object-Oriented Programming, Data Structures, Software Engineering, Database Systems, Testing Methodologies*

## CERTIFICATIONS

- AWS Certified Cloud Practitioner 📅 2022
- Certified Tester Foundation Level (CTFL) 📅 2020

## TECHNICAL SKILLS

- **Programming Languages:** Java, Python, TypeScript, JavaScript
- **UI Automation:** Playwright, Selenium WebDriver, asynchronous testing
- **Python Testing:** PyTest, Unittest, Python fixtures
- **Java Testing:** TestNG, Java collections, object-oriented programming
- **BDD Frameworks:** Cucumber, Gherkin, Behave
- **API Testing:** Karate Framework, REST, API integration testing
- **CI/CD Platforms:** Jenkins, Jenkinsfile, declarative pipelines
- **Version Control:** Git, Gitflow, feature branching
- **Test Reporting:** Allure Framework, custom dashboards, historical trends
- **AWS Services:** EC2, S3, RDS, Lambda, CloudWatch
- **GenAI Tools:** GitHub Copilot, Windsurf, Claude
- **Scientific Systems:** LIMS, chemical data workflows, scientific visualizations

## PROFESSIONAL AFFILIATIONS

- Member, Association for Software Testing, with focus on practical quality engineering methods.
- Participant, Raleigh technology community, sharing automation patterns and scientific software testing lessons.
