Hiring Team
Northstar Meridian Bank
Newark, NJ

Dear Hiring Team at Northstar Meridian Bank,

I am excited to apply for the VP of Software Engineering Cloud-Native **AI & Data** position at Northstar Meridian Bank. With eight years of **software engineering leadership** in regulated financial environments, I bring a strong fit for this role and a record of guiding cloud-native platforms, data capabilities, AI services, and modern user experiences.

In my current role as Vice President of Software Engineering at Clearwater Financial Technologies, I lead a 34-person engineering organization supporting risk and treasury stakeholders. I set technical direction across AWS, Kubernetes, Terraform, Snowflake, and Kafka, and I guide architecture decisions that support secure delivery, reliable operations, and strong developer productivity.

My experience includes leading **React** and TypeScript applications, productionizing AI scoring services, and building data pipelines with clear lineage and access controls. I have mentored engineering managers and senior technical leads, partnered with product, data science, security, and risk teams, and turned broad technical roadmaps into coordinated delivery across multiple squads.

Northstar Meridian Bank's focus on **cloud-native architecture, data engineering, AI, and modern UI development** is especially appealing to me. I would welcome the chance to help shape technical initiatives that serve banking teams and customers, guide engineers through meaningful work, and build platforms that meet the high standards of a regulated financial organization.

Thank you for your consideration. I would welcome the opportunity to discuss how my leadership and technical background can support Northstar Meridian Bank.

Sincerely,

Emilio Nguyen
